Professional Summary

Security-focused Systems Administrator with experience in vulnerability management, log monitoring, and security compliance across enterprise environments. Hands-on experience with tools including Nessus, Rapid7, Wireshark, and Splunk to identify vulnerabilities, investigate anomalies, and support remediation efforts. Background supporting SOC 2 and ISO 27001 compliance with strong knowledge of security frameworks including NIST and CIS.

Certifications

- CompTIA A+
- Microsoft Azure Administrator (Expired July 2022)
- CompTIA Network+
- CompTIA Security+

Professional Experience

Honeywell FM&T

May 2023 – Present

Network Analyst II

April 2026 – Present

- Modernized critical infrastructure supporting geographically distributed transportation operations.
- Redesigned network infrastructure to improve performance, reliability, and operational efficiency.
- Developed automation for system updates and the deployment of containerized, mission-critical systems.

Systems Administrator II

May 2023 – April 2026

- Designed and maintained policies for sensitive file transfer between security domains of confidential documents
- Maintained endpoint protection and vulnerability response processes across secure systems, ensuring rapid mitigation of emerging threats and zero-day vulnerabilities.
- Authored comprehensive process documentation during development, translating complex technical workflows into clear, actionable guidance for diverse audiences.
- Designed workflows for Managed File Transfer (MFT) of confidential and non-confidential files between NNSA sites

Cyber Security Works

May 2022 – February 2023

Systems Administrator

- Designed and implemented a virtualization platform to elevate performance, speed, and reliability of mission critical operations with Ubuntu Server and RHEL.
- Implemented a number of virtual containers to implement internal tools to improve efficiency of client facing operations
- Transitioned logging operations to a centralized platform that improved the review of logs.
- Utilized vulnerability management tools including Nessus and Rapid7 to identify and track remediation of security vulnerabilities.
- Formulated and enforced NIST, CIS, SOC2, and ISO 27001 compliant procedures.
- Authored technical documentation translating complex workflows into operational guidance.
- Gained hands-on exposure to AWS services (IAM, S3) through development environments, focusing on access control, secure configuration, and identity management concepts

Systems MD

March 2021 – May 2022

IT Support Specialist

- Help desk remote and some on-site support assisting customers resolve their computer issues in a polite, professional manner.
- Diagnosing/troubleshooting and resolving hardware and software related issues.
- Computer setup, cleanup, upgrades, virus removal, and other maintenance.
- Support common business and productivity software.
- Assist callers with request for information technology services, repair or support requests, complaints, and inquiries and direct to appropriate IT personnel via ticketing system.
- Document client calls, issue resolution, and related processes and procedures.
- Co-led transition efforts toward Microsoft Azure-based infrastructure, assisting in planning, migration considerations, and modernization of on-premise systems
- Worked on networking overhaul project for a large client, disposing of and replacing all routers, switches and cabling in the MDF as well as 6 IDF's around the campus, both wired and wireless connectivity.

Education

New Mexico State University

Las Cruces, NM

- Bachelor of Information and Communication Technology (May 2020)
- Cumulative 3.9 GPA

Central New Mexico Community College

Albuquerque, NM

- Earned Associate of Applied Science Degree, Computer Information Systems with a concentration in Network Administration (2017)
- Phi Theta Kappa member, with 3.61 GPA

Skills

Security & Vulnerability

Management

- Nessus
- Rapid7
- Wireshark
- Splunk
- DoD STIG
- Vulnerability assessment and remediation

Security Frameworks &

Compliance

- NIST
- CIS
- SOC 2
- ISO 27001

Networking

- TCP/IP, DNS, DHCP

- Firewall log analysis
- WAN/LAN configuration
- Cisco IOS CLI
- Packet analysis (Wireshark)
 - Network traffic analysis and packet inspection

Operating Systems

- Linux (CLI administration)
- Windows Server

Cloud Platforms

- AWS
- Microsoft Azure
 - Microsoft 365 administration

Scripting & Automation

- Bash
- Python
- PowerShell

Infrastructure & Virtualization

- Proxmox
- VMware ESXi
- Docker
- Vagrant
